Appendix A - Individual Services (Faith Community Only)

The main report examines the local church community as a whole. However, overall results can mask a number of different characteristics and dynamics that are at play in individual services.

For example

Is the weekly congregation more representative of the overall congregation at some services than others?

Does the pattern of services or the week of the month influence attendance?

Is an early morning or evening service only attended by the elderly?

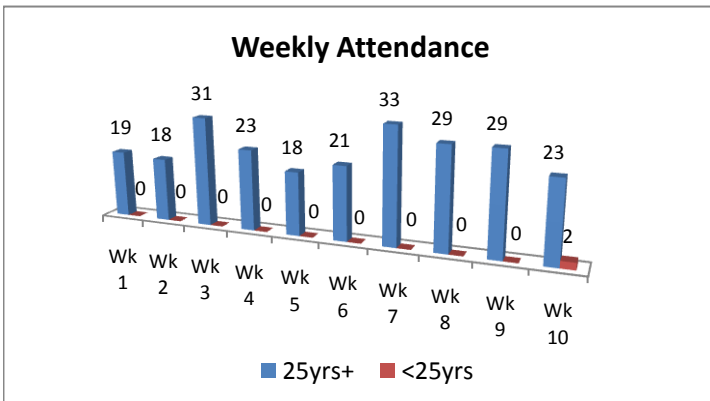

Are certain services only attended by the more frequent attendees?

By examining the results of different services a more specific picture of the service congregation may emerge.

Sunday 8.00am Christ Church

	Average Wkly	Highest Wkly	Overall
Attendees			64
Attendance	25	33	246

The overall number of individual attendees was
