

Christ Church Barnston

Faculty Application: Memorial Garden

Notes.

1. The Memorial Garden will be constructed in an area 2.5 metres by 18.25 metres which is currently paved with paving slabs that runs parallel between the outer Church wall and a path way on the south side of the Church (see photograph of area of proposed memorial garden).
2. The existing paving slabs and bushes will be removed.
3. Approximately 25/50mm of soil will be also removed to form a flat base.
4. The area will be compacted with mechanical whacking plate to provide a firm base on which the Eco grids will be laid.
5. Gravel boards will be set in the soil to provide an edging between the eco grid system and the Church wall.
6. The interlocking eco grid system will be laid on the compacted base between the gravel board and existing pathway edging kerb, the individual sections will be filled with a mixture of soil and sand (see Photograph of eco grid which measures 330mm x 300mm x 50mm depth).
7. The eco grid system will be overlaid with black granite slabs.
8. For the interment of ashes, the granite slab will be lifted, the soil mixture removed from the section of the eco grid being used which will allow an auger hole to be drill deep enough to allow for the interment of ashes.
9. The eco grid will then be refilled with soil/sand and the granite slab replaced.
